

Getting better. Everyday.

ARYS™ me

We empower rehabilitation.

ARYS™ me

The unique **ARYS™ me** system can help you or someone you love regain lost arm and hand function due to hemiparesis after a stroke or traumatic brain injury. The innovative combination of a bracelet with an integrated activity tracker and dedicated smartphone app records all of your arm movements and transforms the collected data into therapy-relevant information for you and your therapist. This allows your daily progress to be visualized through the game «Tree of Recovery» of the app in an easily understandable way and can be recalled any time.

The tracker – which is worn on the affected arm – integrates the latest sensor technology to measure arm movements. Each handshake starts to be a part of your daily therapy. The tracker

ARYS™ me has been developed in close collaboration with leading neurologists and therapists in the field of neurorehabilitation.

itself impresses with its simplicity and high-quality design. The animated «Tree of Recovery» in the app grows with every arm motion and makes the rehabilitation process more varied, engaging, and motivating. Special efforts will be rewarded by a bloom of the tree – a nice way to show your family and friends the progress you have already made.

Whatever the day holds for you: With **ARYS™ me** you will get the motivation and personal insight that you need to achieve your goals to regain hand and arm function faster.
